Moving at the speed of ice

Marsh Pegs

Installing Marsh Pegs

Floor Sockets

Inserts should be galvanized or steel, with sizes as follows:

- 1 5/8" Pegs - 2" inside diameter x 4" Deep
- 1 3/8" Pegs - 1 3/4" diameter x 4" Deep
- 13/16" Pegs - 1" diameter x 4" Deep

Pegs will be loose-fitting in the inserts and the net as part of the flexibility.

To accommodate installation of inserts, floor may have to be re-drilled (suggestion - start the ice plant to locate the brine lines).

Epoxy may be needed around the insert after installation.

Maintenance and Period Flooding

- 1 Lift net off Pegs.
- 2 Remove Pegs.
- 3 Plug holes (bottom of styrofoam cup works well) or remove slush from holes after flooding (using a large spoon or turkey baster).
- 4 Drop Pegs back in inserts after flooding is complete.

Make sure that Peg is 3 INCHES above the ice surface!
